

Kentucky FirstNet - SLIGP Project

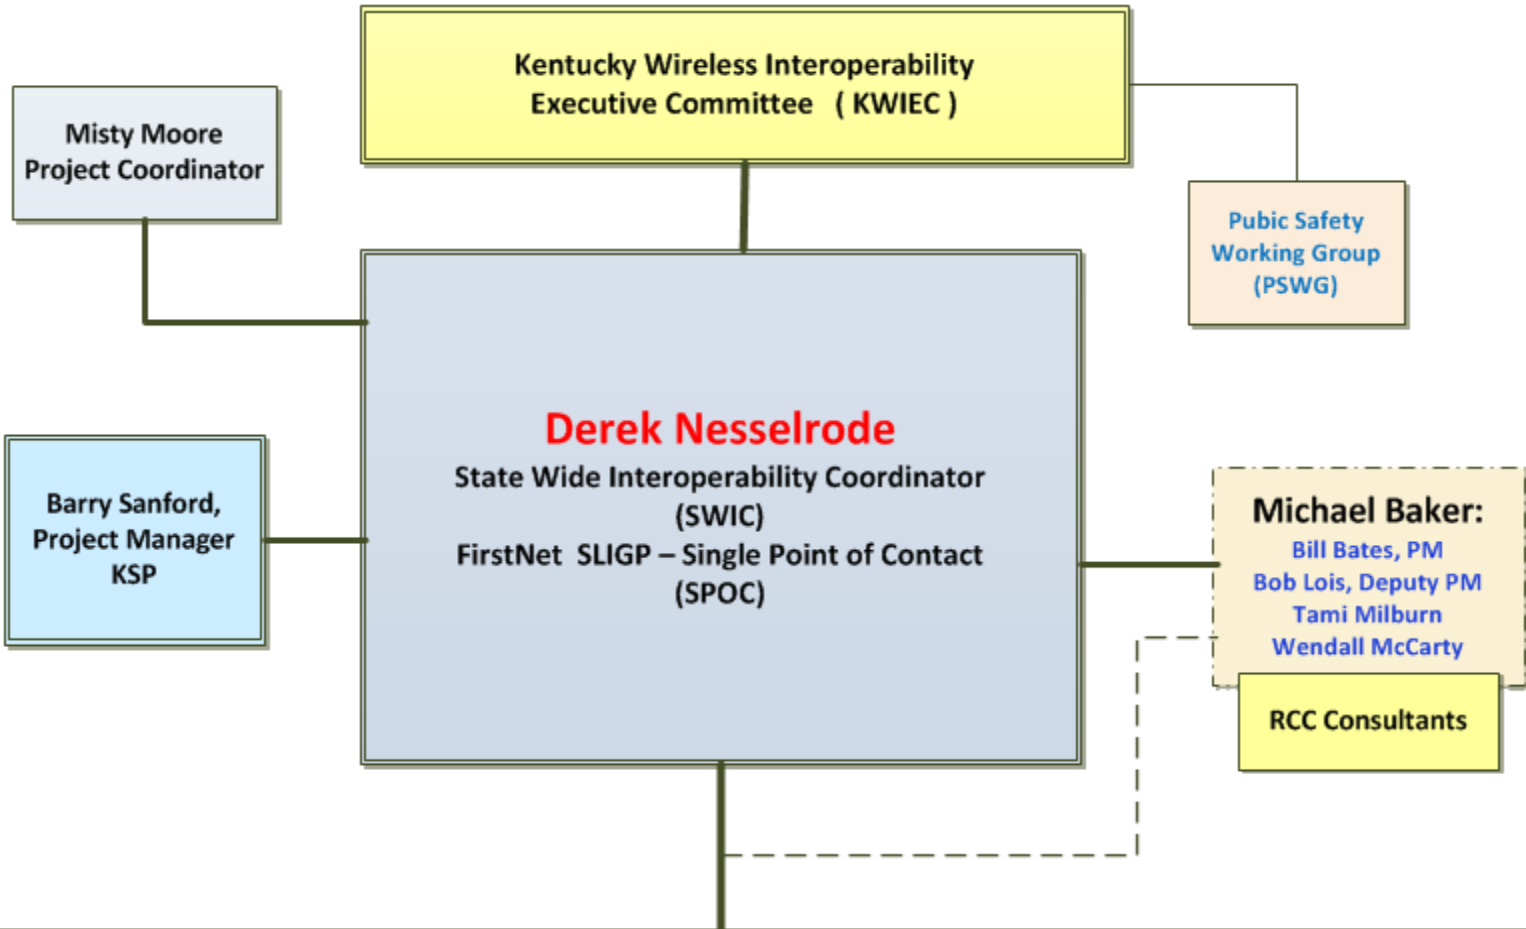

This PowerPoint was prepared by KSP using funds under award from the National Telecommunications and Information Administration (NTIA), U.S. Department of Commerce (DOC). The statements, findings, conclusions, and recommendations are those of the author(s) and do not necessarily reflect the views of the NTIA, DOC, or FirstNet

Meeting Agenda

1. Introduction
2. Network / FirstNet / SLIGP Overview
 - a) FirstNet and the Network
 - b) SLIGP Structure
 - c) Decision Process
3. LTE Technology Overview
4. Potential Uses/Applications
5. The Planning Process
 - a) Objectives
 - b) Initial Suggestions
 - c) Action Plan
6. Next Steps

Commonwealth First Responder Community

Education and Outreach Locations:

Kentucky FirstNet Outreach Program

The locations for the initial phase of Kentucky's FirstNet Outreach program

Alexandria Fire Department

7951 Alexandria Pike
Alexandria, KY 41001

Date: 5/13/2014
Time: 9:00 AM - 12:00 PM

Ashland Community & Technical College

1400 College Drive
Ashland, KY 41101

Date: 5/14/2014
Time: 9:00 AM - 12:00 PM

Kentucky Transportation Cabinet Conference Center

200 Mero Street C101
Frankfort, KY 40622

Date: 5/12/2014
Time: 1:00 PM - 4:00 PM

Kentucky Dam Village State Park

113 Administration Drive
Gilbertsville, KY 42044

Date: 5/22/2014
Time: 9:00 AM - 12:00 PM

Fraternal Order of Police Lodge

150 Corvette Drive
Bowling Green, KY 42101

Date: 5/21/2014
Time: 9:00 AM - 12:00 PM

The Center for Rural Development

2292 South Hwy 2
Somerset, KY 42501

Date: 5/20/2014
Time: 1:00 PM - 4:00 PM

Hazard Community & Technical College

One Community College Dr
Hazard, KY 41701

Date: 5/15/2014
Time: 9:00 AM - 12:00 PM

Overview of Education/Outreach Sessions

- **Session One**
 - Introduction and high level overview of the project and what to expect
- **Session Two**
 - Detail on the project, updates and timelines
 - Preparation for requirements gathering
- **Session Three**
 - Focused on requirements gathering
- **Session Four**
 - Focused on asset data collection

FirstNet / SLIGP Overview

Historic Legislation for Public Safety

On February 22, 2012, the President signed into law HR 3630, "The Middle Class Tax Relief and Job Creation Act of 2012," which includes Title VI: "Public Safety Communications and Electromagnetic Spectrum Auctions"

Broad Scope of Title VI --

- Created the First Responder Network Authority (FirstNet) in NTIA to Administer the PS BB Network
- D Block spectrum reallocated to PS
 - FirstNet will be the sole licensee!
- \$7B for design of Nationwide BB Network
 - Permanent funding to come from network user fees and lease fees
- **\$135M for planning and implementation grants**
- \$100M + 200M* for NTIA research and development
- \$115M for Next Generation 9-1-1 Grants

FirstNet Duties & Responsibilities

- Develop and implement a nationwide system configuration
- Issue system construction RFP's
- Ensure the ongoing maintenance, operation and improvement of the network
- The NPSBN would be designed with broad input from public safety agencies at the state, territory, county, municipal, and tribal levels
 - Input will come during the consultation process
 - **We are now beginning this process . . .**

Title VI Description of the Network --

- Under the Act, a separate and distinct NPSBN would be designed and developed principally for public safety use
- The NPSBN would be a single interoperable network by itself and not a network of network
- The NPSBN would be designed with broad input from public safety agencies at the state, territory, county, municipal, and tribal levels

The Network --

The National Public Safety Broadband Network (NPSBN) will:

- ✓ Be based on new commercial standards (LTE);
- ✓ Include national & regional data centers (Cores);
- ✓ Include a Radio Access Network (RAN) and backhaul;
- ✓ Be constructed, managed, maintained and operated taking into account the plans developed in the State, local, and tribal planning and implementation grant program;
- ✓ Leverage existing commercial wireless infrastructure;
- ✓ Be integrated with PSAP's;
- ✓ *NOT* replace current LMR system anytime soon (if at all).

Devices For The Network

FirstNet will work with the vendor community on portable devices and in-vehicle routers

	Portables	In-Vehicle Routers	Specialized	Accessories

State and Local Implementation Grant Program (SLIGP) - *Structure*

- **Phase One** to be used for the following activities;
 - Planning, consulting, and development activities in preparation for consultations with FirstNet;
 - Defining coverage needs, user requirements, and network hardening and resiliency requirements;
 - *Collecting requirements and establishing a baseline design*
- **Phase Two** to be used for:
 - Preparing for additional consultation with FirstNet and performing data collection activities;
 - *Identifying network resources and developing a more detailed design and business plan.*

SLIGP - Eligible and Ineligible Costs

- **Eligible Costs:**

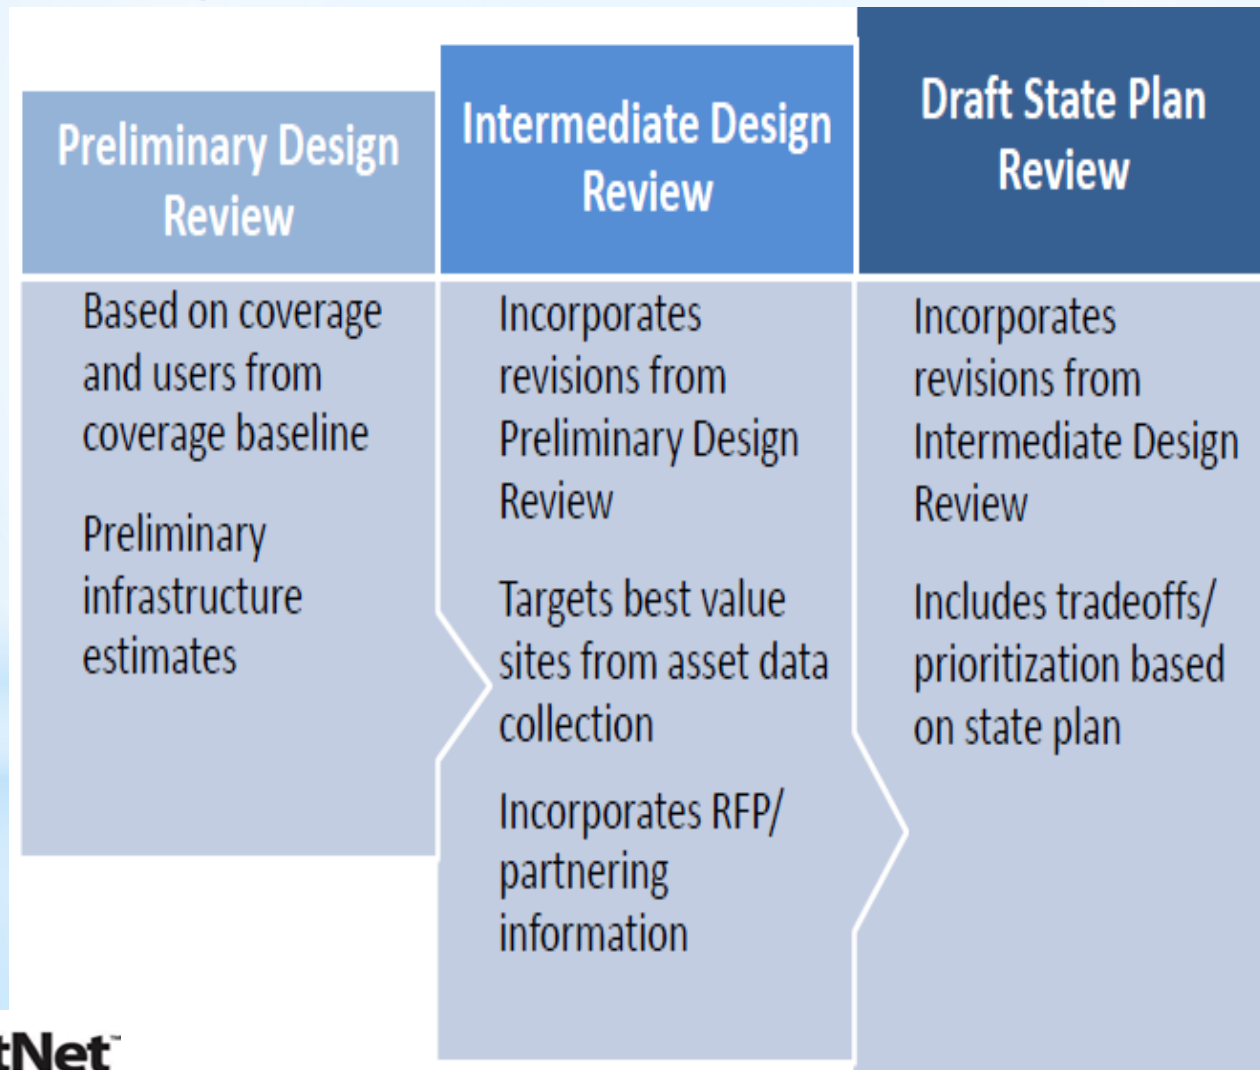

- Personnel Costs;
- Costs associated with planning meeting, including travel costs;
- Costs to develop, modify, or enhance statewide plans and governance structures;
- Costs for communications, education, and outreach activities;
- Costs to develop standardized MOAs;
- Costs to identify potential public safety users;
- Administrative, legal and training costs;

- **Ineligible Costs:**

- Site preparation;
- Broadband deployment, installation, construction, or the acquisition of equipment used to provide wireless broadband services.

FirstNet Vision of the Consultation and Design Process

The Decision Process...

- Upon completing the State Plan, the FirstNet Authority will provide KY:
 - Details of its proposed portion of the FirstNet build out plan (RAN Design), and
 - The Kentucky build out funding and business plan.
- States have 90 days to determine if the FirstNet offer meets its public safety needs and decide whether to accept the FirstNet offer (Opt-In) or to (Opt-Out) and develop its own network

(*States can still apply for grant funding and to lease needed spectrum)

The Business Case

FirstNet is Developing the Business Case for the National Public Safety Broadband Network (NPSBN):

- ✓ Funding for the build-out will come from the \$7B;
- ✓ The network must be self-sustaining;
- ✓ Users will pay a monthly service fee for use of the network;
- ✓ States that “Opt-Out”:
 - ✓ Will be allowed to apply for funding; pay a spectrum lease fee; pay a core connection fee;
 - ✓ Will not be allowed to offer commercial service; all funds collected must be used for maintenance and upgrades.

To develop the business case, FirstNet will need to know: coverage and capacity requirements; number of users; assets available

LTE Technology Overview

LTE is Unique

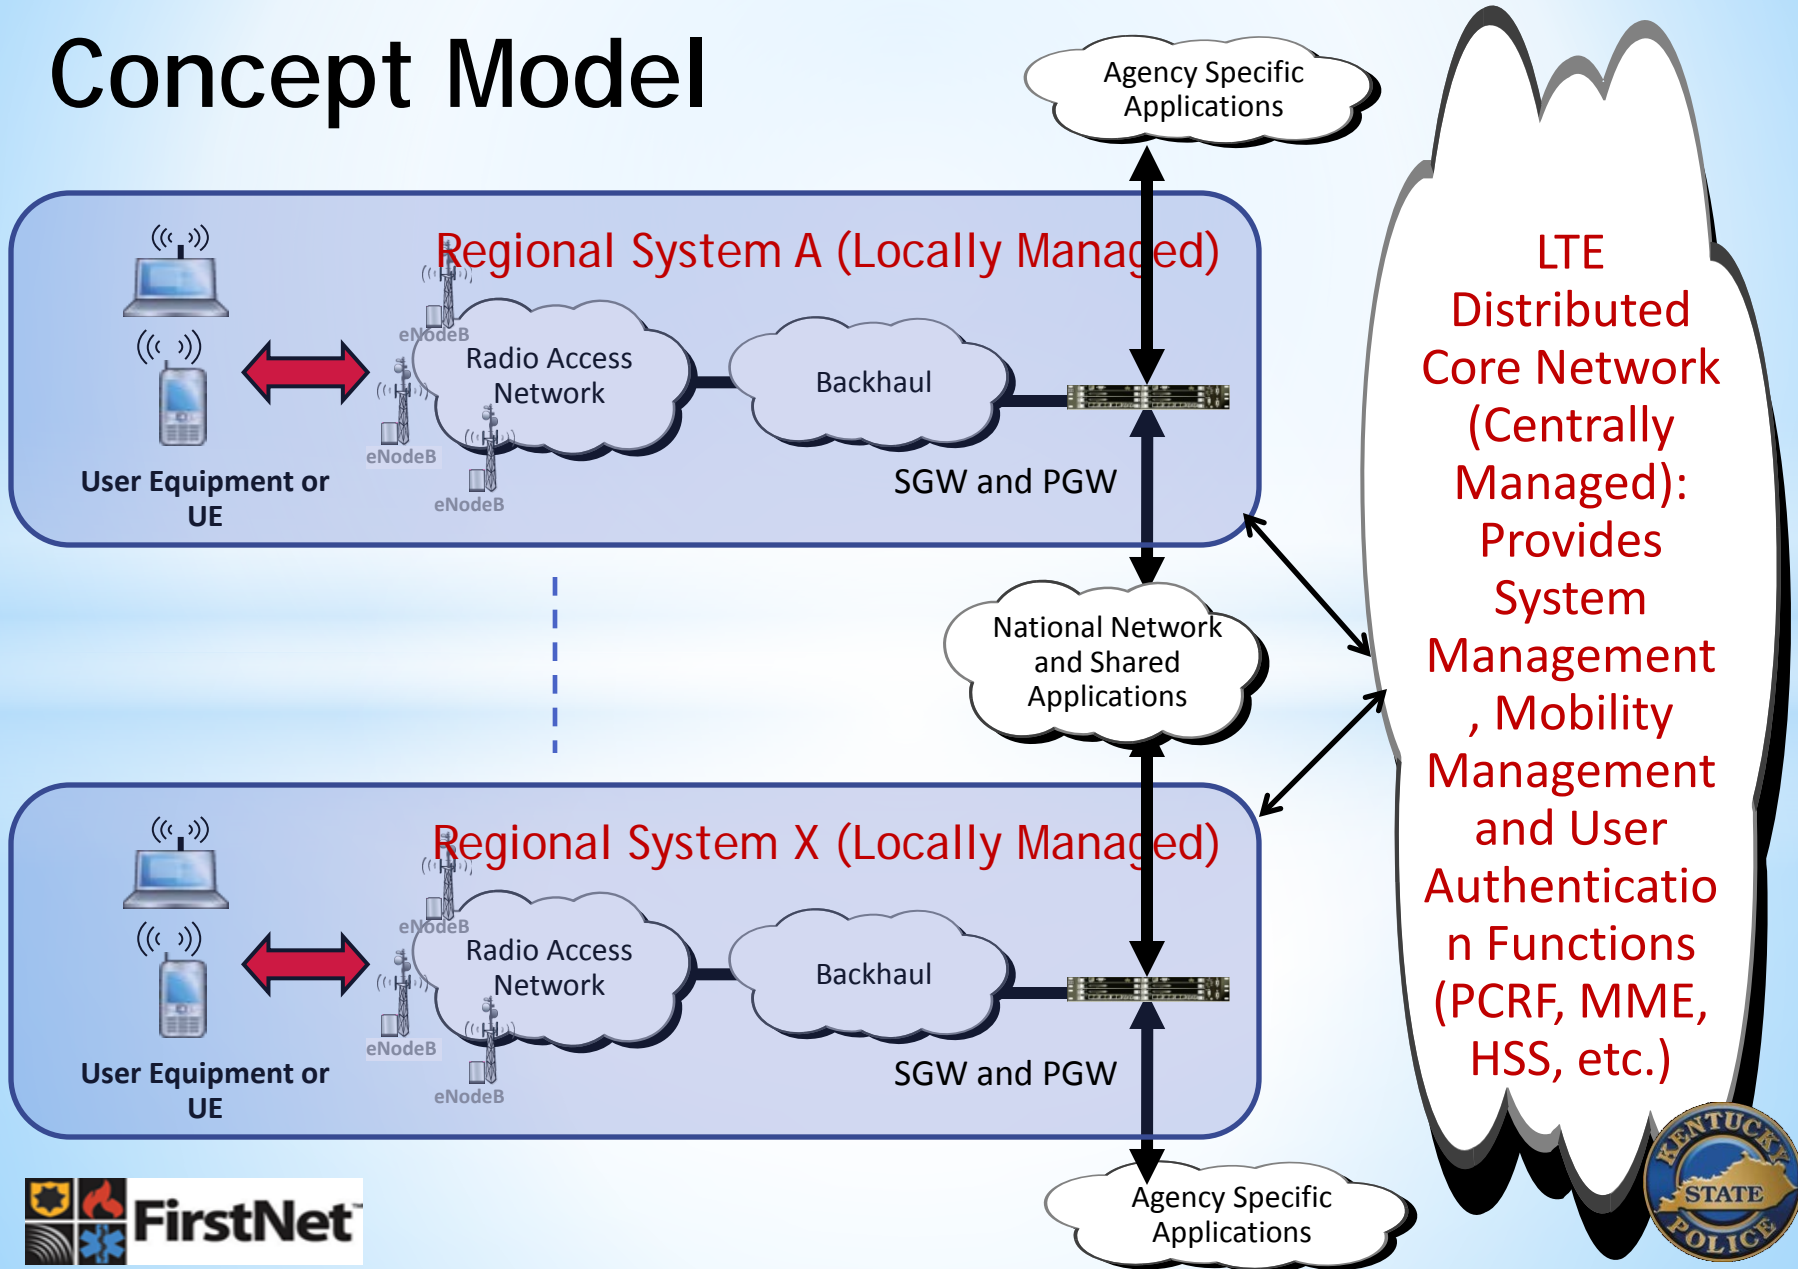

- Designed from ground up (e.g., flat IP network); multiple releases;
- Complex set of processes to improve spectral efficiency and maximize data throughput (Uplink [UL] to 75 Mbits/sec, Downlink [DL] 300 Mbits/sec [in a 20 MHz channel]);
- Many advanced techniques: OFDM, MIMO, antenna sectorization, FEC, fast dynamic scheduling, link adaptation techniques, power control techniques, adjacent cell interference techniques;
- Issues: Frequency reuse = 1 (more interference limited than earlier systems with reuse =7); high peak to average RF power; still new technology; not designed for public safety

LTE Systems differ from LMR

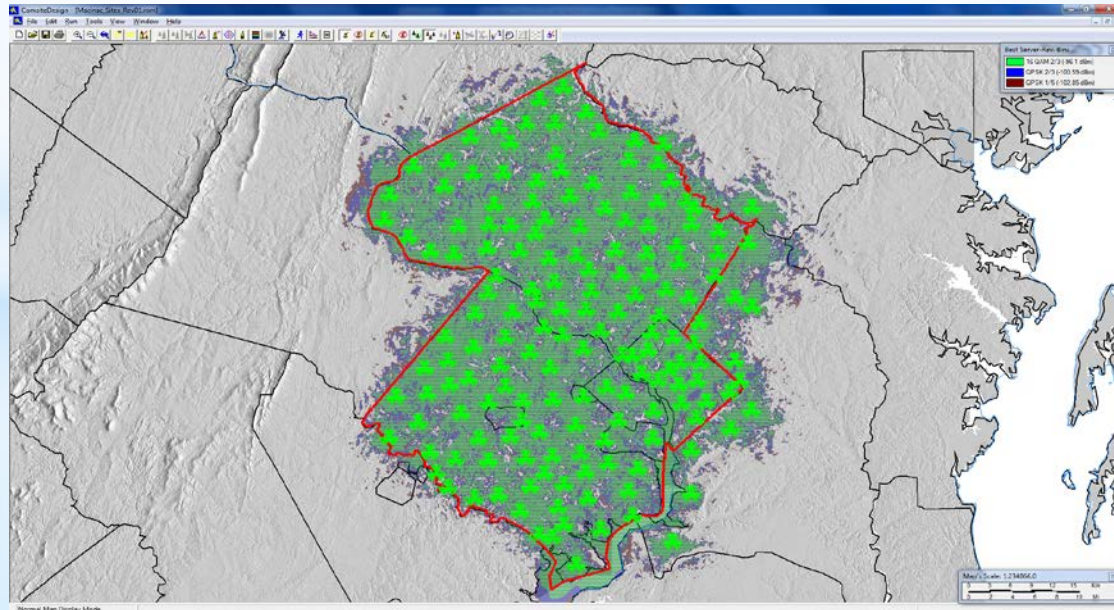

- Major System Performance Attributes
 - It's coverage and data capacity (# users, speeds, BER, latency),
- User Experience
 - Data speeds will unexpectedly increase/decrease because of other users (like a cable broadband system),
- Priorities/QoS
 - LTE has multiple mechanisms; must be pre-planned for PS operations,
- Failure Modes
 - Complex network centric system; currently no direct mode,

PS LTE Distributed Core/Local RAN Concept Model

LTE Coverage Considerations

- Existing LMR sites may be a starting point for LTE deployment, although antennas are generally lower
- Many more sites will be required for ubiquitous LTE coverage (possibly 5 x sites)
- Same frequency block used at all LTE sites - neighboring site interference affects performance/capacity

Capacity vs. Coverage

- Most of the industry discussion has been about coverage
- Capacity is equally important, even in rural areas
 - Examples: 9/11 Shanksville PA; Horrific PA Amish school house massacre
 - Although rural areas may have less responders; as a result incident commanders may therefore be more dependent on multiple video feeds
- LTE systems reuse the same frequency blocks at every cell site, so adjacent cell sites can interfere with each other and reduce capacity
- Capacity (in megabits/second) falls off rapidly away from the center of the cell

Designing for coverage  Designing for Capacity

Issues Impacting “Delivered Capacity”

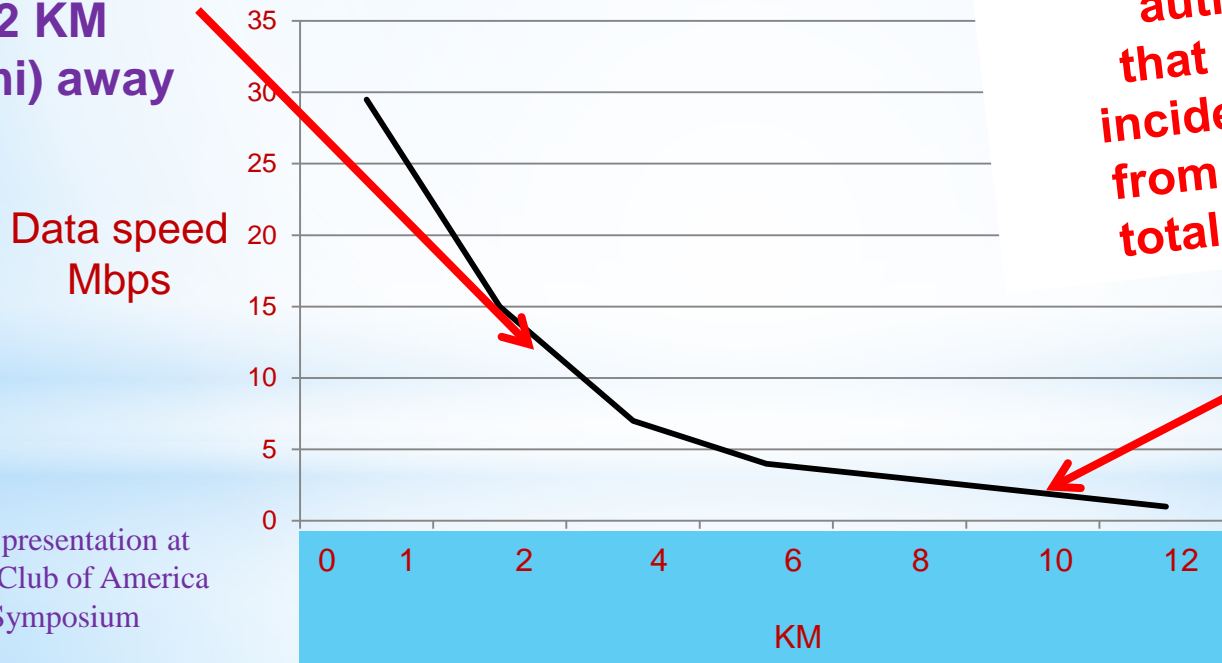

- “Delivered Capacity” is bandwidth that a user has available at her location. It is affected by:
 - User location to cell center (LTE ‘gear shifts’ data speed between 64QAM, 16 QAM, and QPSK)
 - User location to adjacent cell (interference)
 - Antenna sectorization
 - MIMO use
 - User’s prioritization
 - User’s app bandwidth and prioritization
 - App’s FEC and jitter, latency, packet loss sensitivities
 - Nature of user’s traffic, and adjacent users’ traffic: bursty, variable rate, continuous, random (stochastic)
 - Adjacent users in same sector and their apps/priorities
 - Total cell site backhaul capacity vs. total bandwidth demands from all sectors of that cell

Overall capacity decreases as the number of devices increases and a user moves further from the Site

Data Capacity vs. Distance to Cell Site

12 Video Feeds
(1 Mbps each)
At 2 KM
(1.3 mi) away

Uplink Mbps vs. Distance to Cell Antenna
LTE, 10 MHz x 10 MHz

Multiple authors suggest that even common incidents will require from 4.8 to 6.3 Mbps total UL Data speed!

Only One Video Feed At 10 KM (6.5 mi) away

From Tait presentation at 2013 Radio Club of America Tech Symposium

Issues Impacting “Delivered Capacity”

■ Operational Implications:

- Delivered capacity to a particular user will change over time depending on the changes to the factors in the previous slide
 - Completely different experience from voice trunking
 - For example this will result in inexplicable changes to video quality during an incident
- Depending on the incident’s needs, It may be necessary to make on-the-fly changes to user and application priorities in real time

Backhaul Network Considerations

- LTE sites require a large capacity backhaul connection; generally 50-150 Mbps depending on topology
 - Microwave or Fiber
- Backhaul will be larger percentage of network deployment (possibly 40%)
- Backhaul capacity becomes a significant deployment driver

System Roaming

- Public Safety users will have access to common applications and their “home” applications anywhere in the country
 - The NPSBN will have a single PLMN ID
- Opportunity to roam onto commercial system when NPSBN coverage is lacking
 - Applicable to certain geographic areas
 - Devices must be multi-band capable
 - Not likely to have priority service when roaming
 - Roaming charges may apply

Potential Uses & Applications

Applications Supported by the NPSBN

- High Speed Internet Access (Speeds will vary)
- Status Web Page
- VPN Support
- SMS/MMS Services
- Video Services (as bandwidth allows)
- Hosted Applications (NCIC, CJIC, IAFIS, NFIRS)
- Dynamic Priority and QOS Adjustments (Emergency, Immediate Peril, ICS Incident Priority, Itinerant User)
- 9-1-1 Services (traditional and NG)
- Cellular Telephony (Full duplex telephone sessions (Future))
- Commercial Mobile Alert System (CMAS)
- PTT Voice (Non-Mission Critical and Mission Critical (Future))

Example Data Uses by Service

■ Law

- Real time video
- Arrest process check list
- AFIS Fingerprint scanner
- Airborne platform video sharing
- Officer cam
- ALPR

■ Fire

- Vehicle extrication info based on license plate
- GIS info for wildland fires
- Wildland personnel tracking
- In-building personnel tracking

■ EMS

- ePCR from CAD to EMT to hospital
- Geo based illness or pandemic info
- 2 way video hospital -scene
- 12 lead + O2 sat + EtCO2
- 'Just in Time' video refresher enroute

The APCO Application Community

- In April 2013, APCO launched **AppComm**, an on-line community focused on maintaining a collection of applications related to public safety and emergency response, for use by the general public and first responders: <http://appcomm.org/>
- APCO has:
 - An MOU with FirstNet to collaborate on apps;
 - Begun development of an ANSI standard for apps that interface with public safety communications centers;
 - Published the key attributes of effective apps for PS and emergency response

SLIGP Planning Objectives for KY

NPSBN/SLIGP High Level Objective

The primary objective of the SLIGP work is to ensure that the Commonwealth obtains a RAN that meets the needs of KY and all of its constituent public safety agencies. This can be achieved:

- Via the proposed RAN offered by FirstNet “Opt-In”;
- Via a RAN developed and managed by KY “Opt-Out”.

The planning approach maintains
these options

High Level Planning Objective -- *Process*

To accomplish Commonwealth objectives, the Baker/RCC Project Team will work with KSP and the stakeholder community to:

- Ensure the needs of KY for the NPSBN are documented;
- Ensure KY is adequately prepared for consultation with FirstNet;
- Evaluate the FirstNet proposed RAN design, to determine if it meets the needs of the Commonwealth;
- Recommend action to the Commonwealth in the event the RAN offered by FirstNet does not meet KY needs

Planning Process

The KY Broadband team; Members of the KWIEC and the PSWG; the Baker/RCC team met in April to:

- Review the NPSBN overview and update provided by the Office of Emergency Communications (OEC);
- Review the OEC baseline coverage suggestions for KY;
- Establish KY's objectives for the NPSBN and the planning process;
- Discuss the process and next steps.

Established Planning Objectives for KY

- Compile and document requirements and communicate to FirstNet;
 - Review OEC coverage suggestions, plus additions
- Address goals within the SCIP;
- Maximize the use of the NPSBN throughout the Commonwealth and include a broad set of users;
- Maximize the use of existing state assets;
- Coordinate with other on-going state initiatives;
- Minimize device acquisition and maintenance cost.

Requirements - *Coverage Objectives*

- OEC provided valuable data and a “suggested” baseline to be reviewed and updated;
 - Metro/High-Traffic Areas (>1000 people per Mile²):
 - In-building (one wall minimum)/Handheld coverage
 - Outside High Traffic Areas (>500 people per Mile²)
 - Handheld / Partial In-Building Coverage
 - Interstates and Rural Areas (>5 people per Mile²)
 - Vehicle level coverage (some handheld)
 - Rural areas (<5 people per Mile²):
 - Satellite/Deployable

Coverage - OEC Suggested Baseline

OEC Starting Point

- Interstates, major U.S. highways and non-CDP areas with more than 5 people per square mile (using census blocks)
- All other areas would use Satellite/ Deployable coverage.

Requirements - Coverage Priorities for Kentucky

- Key facilities for coverage:
 - First responder facilities;
 - Schools;
 - Hospitals;
 - Specific municipal facilities;
 - Others;
- Address coverage in and around these facilities

Coverage Additions -- OEC Baseline Data

Agencies

- EMS Departments
- Federal
- Military
- Emergency Management
- Law Enforcement
- Fire Departments

Facilities

- Major State Government Building
- Court Houses
- Prison Areas
- Corrections
- Airport
- + Airports
- Local Emergency Operations Centers
- State Emergency Operation Centers
- Urgent Care Facilities
- Hospitals
- PSAP
- Schools
- ⊕ Ports
- Antrak Stations
- Air National Guard (ANG) Sites
- Army National Guard (ARNG) Installations
- Canada and Mexico Border Crossings

Critical Infrastructure

- ◆ Manufacturing
- Hazardous Materials Routes
- ◆ Energy
- ☢ Nuclear Plants
- ◆ Dams
- ◆ Public Venues

Requirements - *Capacity*

- Establishing capacity objectives:
 - OEC provided valuable data for agencies and locations;
 - KY Project Team is compiling a list of stakeholders and agencies within the Commonwealth;
 - The needs of each of these agencies will be compiled with input received during the needs assessment;
 - Also address specific events throughout Kentucky --
 - Derby; Thunder Over Louisville; World Equestrian Games;
 - Basketball and Sports Games; Other large events?;

Planning Objectives: *SCIP Goals*

- Replace Kentucky Wireless Information Network Service (KyWINS); Support KyWINS Messenger
 - Will drive coverage
- Achieve sustainable funding in the current fiscal climate is a priority for Kentucky.
 - Will drive the business plan
 - Legislation requires the network to be self-sustainable

Planning Objectives - *Users*

- Maximize the use of the NPSBN throughout the Commonwealth -- include a broad set of users:
 - Public safety and First Responders,
 - Other agencies and responders (EMA, DOT, public works, etc.),
 - Local government and elected officials,
 - Federal users operating in the Commonwealth,
 - Utilities, telcos, etc.

Planning Objectives - *Assets*

- Maximize the use of existing assets*:
Government and commercial;
 - Existing communication sites;
 - Potential communication sites (government-owned lands, tall buildings, etc.);
 - Backhaul Infrastructure;
 - Staff and human resources.
- Maximize synergies with on-going or planned projects
 - Next Generation Kentucky Information Highway (NG KIH).

*FirstNet will provide a list of attributes
to be used for asset data collection

SLIGP Planning:
Action Plan and Next Steps

Current Action Plan - *Establish Coverage Requirements*

- Distribute OEC proposed coverage boundaries on a county-by-county basis:
 - County reps to review and provide feedback and suggested changes;
- Compile list -- buildings and facilities to be covered:
 - Compare facility locations relative to proposed coverage boundaries;
 - Determine what additions are required;

Be Prepared to Respond to these Requests

Current Action Plan -- *Identifying Potential Users*

- Work with the Commonwealth and the individual counties to identify all first responder and support agencies that would potentially utilize the NPSBN to:
 - Protect life and property;
 - Respond to incidences and emergencies;
 - Stabilize incidences and prevent further damage;
 - Enhance situational awareness and information management;
 - Recover from emergencies and restore critical infrastructure.

Be Prepared to Review Current Agency List

Future Action Plan - *Establish Capacity Requirements*

- Baker/RCC team will perform a geographically - based needs assessment to compile PS broadband capacity needs:
 - OEC recommendations do not address capacity;
- The aggregated coverage/capacity needs will drive the design for the RAN within the Commonwealth;
- The requirements will be communicated to FirstNet and used during the consultation process.

Capacity Needs Assessment Process

- The needs assessment will include:
 - Number of users;
 - List of applications by agency/department;
 - Usage patterns by agency/department geographically throughout KY;
 - List of incident types:
 - Number/mix of resources by incident type:
 - Typical application usage patterns by resource during an event:
 - If available, a map of incident types and frequency on a statewide basis.

**Future Correspondence will
Request Your Input**

Example Traffic Data Layer

Broadband Data Traffic Density Layer in Mbps

Next Steps: Planning Sessions 2 and 3: Needs Assessment and Traffic Definition

- Prepare users for and conduct needs assessment:
 - Compile list of users today - consider the future
 - Compile list of applications used today - consider future;
 - Identify usage patterns by department geographically throughout the Commonwealth;
 - Investigate existing usage reports;
 - Investigate historical information on events and incidences (locations, users involved, applications, etc.).

Additional Information to Come

Education and Planning Session 4: Identification of Infrastructure

- Recommend participating agencies begin to identify potential infrastructure assets that can be used in the NPSBN deployment. Potential assets include:
 - Existing towers/water tanks;
 - Building rooftops;
 - Potential site locations;
 - Backhaul (fiber, microwave);
 - Data centers;
 - Staffing: maintenance, PMs, technicians.

Additional Information to Come

Questions and Discussion
